

SynoraCare Feature Handbook

Guide to what every major feature, workflow, and button does in the web application

Generated from the current frontend implementation

Use this handbook for onboarding, internal support, demos, and role-based product walkthroughs. It covers guest mode, authenticated mode, dynamic dashboard controls, and action buttons across the app.

This handbook explains what each major feature, section, and button in the SynoraCare web app does. It is intended for onboarding, internal training, and quick-reference support.

How to Read This Guide

- Guest mode refers to the public-facing experience before sign-in.
- Authenticated mode refers to the application after a user signs in.
- Some navigation items are role-based and only appear for supervisors or admins.
- Demo Mode shows sample data and lets teams explore the product without changing live records.

Global Header And Navigation

Sidebar Toggle

- Sidebar Toggle: Opens or closes the sidebar on smaller screens.

Topbar Items

- SynoraCare AI logo: Returns the user to the main app context visually and anchors the header.
- Version badge: Displays the current app version when backend status data is available.
- Session info: Shows whether the user is signed in and, when authenticated, reflects the current user context.
- Demo toggle: Turns Demo Mode on or off when the current session is allowed to use sample data.
- Sign Out: Clears the active session, resets in-memory data, and returns the app to guest mode.

Sidebar Navigation Buttons

- Dashboard: Opens the home dashboard with welcome text, role-specific shortcuts, summary cards, and alerts.
- Ask AI: Opens the grounded Q and A workspace for asking questions about a selected client.
- Tracker: Opens the patient tracker feed, summary, and event logging forms.
- Patient: Opens the patient workspace where records are grouped into domain tabs.
- Documents: Opens the document upload workflow for care files such as ISP, MAR, and behavior plans.
- Assign: Opens the assignment form used to link staff members to clients.
- Team: Opens the team invitation and team list section.
- Clients: Opens the client creation and client list section.
- Break Glass: Opens the emergency access workflow for temporary elevated access.
- Audit: Opens the audit log review section.
- Legal: Opens the legal records export section.
- Training: Opens the micro-training section with role-aware guidance.

Guest Mode Features

Landing Hero

- Book Demo: Opens the demo request form and scrolls the user directly to it.
- Request Pilot: Opens the same request form and positions the user at that section.
- See How It Works: Opens the request form as an entry point for product follow-up.
- Faster Decisions badge: Communicates the product value around speed of decision-making.
- Less Paperwork badge: Communicates the product value around reducing manual overhead.
- More Confidence badge: Communicates the product value around safer, more consistent care execution.

Demo Request Form

- Organization Name: Captures the requesting organization.
- Your Name: Captures the requestor's name.
- Email: Captures the contact email for follow-up.
- Phone: Captures an optional phone number.
- What are you interested in?: Tags the request as a demo, pilot, or walkthrough inquiry.
- Tell us a bit about your team: Captures optional context about team size, care setting, or needs.
- Send Request: Submits the request to the backend contact workflow.
- Close: Hides the demo request form.

Organization Setup

- Organization Name: Sets the organization display name.
- organization-slug: Sets the URL-friendly or internal slug used for org setup.
- State Code: Stores a two-letter state reference for retention and compliance logic.
- Admin Full Name: Sets the first administrator's name.
- Admin email: Sets the first administrator's email.
- Password: Sets the first administrator's password.
- Create Organization: Boots the first organization and admin account, then signs the user in.

Login Card

- Email Address: Captures the sign-in email.
- Password: Captures the sign-in password.
- Toggle password visibility: Switches the password input between masked and visible states.
- Login: Authenticates the user and loads the authenticated app state.
- Forgot Password?: Opens or closes the password reset panel and prefills the email when possible.
- Admin Recovery: Opens or closes the admin recovery panel for recovery-key-based reset.
- Request a demo link: Switches from the login card to the demo request flow.
- Demo View (Sample Data): Enables Demo Mode from the login screen so the product can be previewed with sample data.

Password And Account Recovery Panels

- Reset Password panel: Issues a short-lived reset token and completes a password reset flow.
- Email address in Reset Password: Specifies the account to reset.
- New password in Reset Password: Sets the replacement password.
- Reset Password button: Completes the forgot-password reset flow.
- Complete Your Invitation panel: Lets invited users activate their account using the invite token in the URL.
- Full name in invitation panel: Records the invited staff member's name.
- Email in invitation panel: Shows the invited account email as read-only.
- Password in invitation panel: Sets the invited user's password.
- Accept terms checkbox: Confirms organization security and compliance terms.
- Activate Account: Finishes account activation and signs the invited user in.
- Admin Account Recovery panel: Lets an administrator recover access using a recovery key.
- Admin email: Identifies the admin account.
- New password in admin recovery: Sets the replacement admin password.
- Recovery key: Authenticates the recovery attempt.
- Reset And Sign In: Completes account recovery and signs the user in immediately.

Authenticated Dashboard

Dashboard Elements

- Welcome message: Personalizes the dashboard using the signed-in user's name.
- Role tag: Shows the active role, such as DSP, Supervisor, or Organization Admin.
- Clients stat card: Shows the current number of clients and opens the Clients section when selected.
- Pending stat card: Shows pending tracker entries and opens Tracker filtered to pending items.
- Escalated stat card: Shows escalated tracker entries and opens Tracker filtered to escalated items.
- Completed stat card: Shows completed tracker entries and opens Tracker filtered to completed items.

Role-Based Quick Actions

- Ask Grounded Q and A: Takes a DSP directly to the Ask AI page.
- Log Event: Takes a DSP directly to Tracker.
- Emergency Access: Takes a DSP directly to Break Glass.
- My Training: Takes a DSP directly to Training.
- Review Tracker: Takes a supervisor directly to Tracker.
- Upload Document: Takes a supervisor directly to Documents.
- Assign DSP: Takes a supervisor or admin directly to Assign.
- Audit Log: Takes a supervisor or admin directly to Audit.
- Add Team Member: Takes an admin directly to Team.

- Add Client: Takes an admin directly to Clients.
- Legal Export: Takes an admin directly to Legal.

Dashboard Alerts

- Get started hint: Appears for admins when no clients exist and includes an Add First Client shortcut.
- Add First Client: Scrolls the user to the client creation section.
- Escalated item alerts: Show the most urgent escalated tracker items requiring attention.

Ask AI

- Select Client: Chooses which client's documents and records will ground the answer.
- Refresh clients: Reloads the client list used in the selector.
- Morning meds schedule: Inserts a starter question about medication timing into the Ask AI text box.
- Bathing assistance: Inserts a starter question about personal care support.
- Escalation steps: Inserts a starter question about escalation protocol.
- Dietary needs: Inserts a starter question about diet restrictions or preferences.
- Ask question text area: Lets the user type a freeform grounded question.
- Send: Submits the question to the backend ask workflow.
- AI answer bubble: Displays the returned answer.
- Source tags: Show which documents or sources informed the answer.

Training

- Pre-Shift: Shows checklist and reminders for the start of a shift.
- Documentation: Shows guidance focused on accurate and compliant recordkeeping.
- Grounded Q and A: Shows guidance for using the Ask AI workflow responsibly.
- Escalation: Shows guidance for urgent or higher-risk scenarios.
- Checklist panel: Displays action steps for the selected training context.
- Policy reminders panel: Displays policy-level reminders for the selected context.
- In-the-moment guidance panel: Displays practical tips relevant to the selected context.

Team Members

- Full Name: Captures the invited staff member's name.
- Email: Captures the invited staff member's email.
- Role selector: Assigns the invited user a role such as Org Admin, Supervisor, or DSP.
- Create Invite: Creates an invitation link for the new user.
- Invite output: Displays the generated invite link for sharing.
- Team list: Displays current team members, their role, status, and email.

Clients

- Refresh: Reloads the client list from the current data source.
- Client Name: Sets the client's display name.
- External ID: Stores an optional external or legacy identifier.
- Add Client: Creates a client record.
- Client List: Displays all current clients.

Demo Mode Behavior In Clients

- Add Client in Demo Mode: Creates a local sample client instead of calling the live API.
- Refresh in Demo Mode: Reloads the locally stored demo clients.

Assign DSP

- Refresh Users: Reloads the staff selector.
- Refresh Clients: Reloads the client selector.
- Select User: Chooses the staff member being assigned.
- Select Client: Chooses the client receiving the assignment.
- Expiration date and time: Optionally limits how long the assignment remains active.
- Create Assignment: Saves the user-to-client assignment.
- Assignment output: Displays the API response or any error details.

Upload Care Document

- Refresh Clients: Reloads the client selector for uploads.
- Sample TXT: Downloads or generates a sample text document for testing uploads.
- Sample PDF: Downloads or generates a sample PDF document for testing uploads.
- Select Client: Chooses the client the document belongs to.
- Document type: Classifies the file as ISP, MAR, Behavior Plan, Care Plan, or Other.
- Document Title: Names the uploaded document.
- Effective Date: Stores an optional effective date.
- Document file picker: Selects the file to upload.
- Upload Document: Sends the document to the backend upload endpoint.
- Upload output: Displays the upload result or any error details.

Patient Tracker

Header Controls

- Refresh Feed: Reloads tracker entries in the event feed.
- Summary: Reloads tracker summary statistics.

Summary Cards

- Total: Shows total tracker entries returned in the summary.
- Pending: Shows how many entries remain pending.
- Completed: Shows how many entries are completed.
- Escalated: Shows how many entries are escalated.
- Overdue: Shows how many entries are overdue.

Log Event Form

- Select Client: Chooses the client tied to the tracker event.
- Event Type: Classifies the entry as Medication, ADL, Behavior, Incident, Note, or Handoff.
- Priority: Sets urgency from Low through Urgent.
- Status: Sets the current state as Pending, Completed, or Escalated.
- Summary: Captures the short headline for the event.
- Optional details: Captures longer notes and context.
- Photo: Attaches an optional image from a device or file picker.
- Photo caption: Adds an optional caption to the attached image.
- Due date and time: Sets a target time for follow-up.
- Log Entry: Creates the tracker record, then refreshes the feed and summary.

Update Status Form

- Entry ID: Specifies which tracker item should be updated.
- Status selector: Chooses the new status value.
- Update: Applies the status change and refreshes the tracker feed and summary.

Event Feed Actions

- Event Feed: Lists recent tracker entries.
- View photo button: Appears on entries that include a photo and opens the associated image.
- Inline status buttons: Appear on tracker entries and let users quickly change status to the offered value.

Patient Workspace

- Select Client: Chooses which patient's records to review.
- Load Patient: Loads tracker-derived patient records into the workspace.
- Care tab: Shows ADL, handoff, note, and other general care records.
- Nutrition tab: Shows entries related to food, diet, fluids, or hydration.
- Medications tab: Shows medication-related entries.
- Behavior tab: Shows behavior and incident entries.
- Safety tab: Shows escalated, urgent, or high-priority entries.

- Legal tab: Explains that legal review is handled through the Legal Records Export section.
- Patient record cards: Show summary, type, status, priority, and update time for each matching entry.

Emergency Break-Glass

- Select Client: Chooses which client needs emergency access.
- Duration (minutes): Sets how long the temporary emergency access should last.
- Emergency reason: Captures the mandatory justification for the break-glass event.
- Grant Temporary Access: Sends the emergency access request to the backend.
- Break-glass output: Displays the result of the access grant request.

Audit Log

- Load Audit Log: Retrieves recent security and access-related audit events.
- Audit event type: Shows the type of event that was recorded.
- Audit event time: Shows when the event occurred.
- Audit event user: Shows the user associated with the event.

Legal Records Export

- Select Client: Chooses which client record set to export.
- State code: Sets or overrides the state used for retention policy logic.
- Override years: Optionally overrides the calculated retention period.
- Include audit events: Includes or excludes audit data from the export package.
- Generate Legal Export: Builds a legal export package and preview summary.
- Download Export JSON: Downloads the generated export package as JSON after an export is available.
- Legal summary list: Shows retention policy details, cutoff date, counts, and target client.

Demo Mode

- Demo Mode toggle: Enables sample-data exploration without depending on live records.
- Login-screen Demo Mode toggle: Enables the same sample-data mode before sign-in.
- Demo clients: Can be created locally so the app remains functional during a demo.
- Demo experience: Helps teams explore navigation, dashboards, Ask AI, training, and client workflows safely.

Role Visibility Notes

- DSP users focus on care execution tools such as Ask AI, Tracker, Training, Patient Workspace, and Break Glass.
- Supervisor users gain access to document upload, staff assignment, and audit review.

- Org Admin and Super Admin users gain access to team management, client management, assignments, legal export, and audit workflows.

Operational Notes

- Most refresh buttons reload cached selectors or lists after data changes.
- Most form submission buttons either show toast feedback or render the API response in an output area.
- Sign Out clears session state, client cache, user cache, legal export state, patient workspace state, and visible data panels.
- Escape closes the mobile sidebar when it is open.

Recommended Use For New Teams

1. Use Demo Mode to explore the interface safely.
2. Create your organization only once during first-time setup.
3. Invite team members before assigning them to clients.
4. Add clients before uploading documents or creating assignments.
5. Use Tracker for day-to-day operational logging.
6. Use Ask AI only after selecting the correct client.
7. Use Break Glass only for real emergencies.
8. Use Legal Export when records need retention-aware packaging for review.
